

Rental Stock Load links (KR+LE type)

Water Weights stock a large quantity of standard and non-standard load and strain measuring units in our rental stock.

A standard load cell set consists of a load link with two shackles, readout accessories and a transport case. We can supply both cabled (KR type) and wireless (LE type) links and guarantee a weighing accuracy of less than 1,5%. The LE type telemetry load cells are ultra-light weight aluminium links.

Check the table below for details about our rental load links. Please do not hesitate to contact us for more information about these products.

- * Weight 1: Weight of the load link (without shackles)
- * Weight 2: Weight of the complete set (with shackles and accessories)
- ** We use standard GreenPin shackles for these load links.
