

WaterWeights

Product Report

Rental Stock Load Shackles

Water Weights stocks a large quantity of standard and non-standard equipment for load and strain measurements.

One of those measuring sets is the load shackle, which is a standard shackle with the measuring device built inside the pin. Our load shackle sets consist of a shackle with load-pin, readout accessories and a transport case. This way of load measuring is available from 12 up to 800 tonne. All units are wireless radio telemetry systems, except the 75 and 300 tonne units (*). Please contact us for more information and availability.
